

# DBS Freedom of Information Request Data

#### Introduction

Unlock is a national independent advocacy charity that supports, speaks up and campaigns for people facing stigma, prejudice and discrimination because of their criminal record. Our mission is to advocate for people with criminal records to be able to move on positively in their lives. We: support people with criminal records to navigate their way through challenging times, research and raise awareness of the systemic issues that people are facing, and campaign for changes to legislation, policies and practices of government, employers and others.

Our website provides vital information and guidance for people with criminal records, and we also have a helpline run by dedicated staff and volunteers, which deals with specific queries. People can <u>contact the helpline</u> in various ways, including via email, WhatsApp or our free phone line.

Via a Freedom of Information Request (which can be viewed <u>here</u>), we acquired a large set of data from the Disclosure and Barring Service (DBS) regarding DBS checks completed from 2020-2022. This data could be broken down as follows:

- the number of checks completed overall
- the number of each type of DBS check conducted
- the number of checks which ultimately disclosed anything
- breakdowns by year, age and gender for each of the above

We had also requested for data to be provided regarding the ethnicity of applicants for DBS certificates, but DBS advised that they do not hold this data.

It is important to note that, although Enhanced checks and Enhanced and Barring checks are distinct types of DBS checks, the data that was supplied by DBS treated these two checks together. As such, in the data and discussion, "Enhanced" refers to both types of check.

This document shares some of the headline findings from the data.

## Data

# Overall Figures

Total checks conducted have risen year on year, with the biggest rise being in enhanced checks:

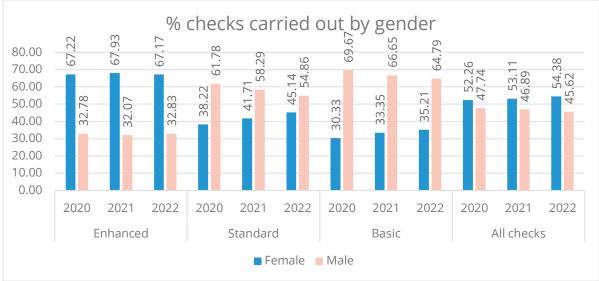

|          | 2020      | % of<br>total | 2021      | % of<br>total | 2022      | % of<br>total | % change<br>2020-2022 |
|----------|-----------|---------------|-----------|---------------|-----------|---------------|-----------------------|
| Enhanced | 3,218,991 | 58            | 3,823,038 | 56            | 4,446,636 | 60            | 38.14                 |
| Standard | 314,526   | 6             | 385,248   | 6             | 388,244   | 5             | 23.44                 |
| Basic    | 1,993,775 | 36            | 2,645,154 | 38            | 2,622,537 | 35            | 31.54                 |
|          |           |               |           |               |           |               |                       |
| TOTAL    | 5,527,292 |               | 6,853,440 |               | 7,457,417 |               | 34.92                 |

## Gender

The overall gender balance in checks conducted is as follows:

|        |          | Fema       | le         |  | Male      | 2          |  |
|--------|----------|------------|------------|--|-----------|------------|--|
|        |          | Number     | % of total |  | Number    | % of total |  |
|        | Enhanced | 2,163,725  | 67.22      |  | 1,055,266 | 32.78      |  |
| 2020   | Standard | 120,226    | 38.22      |  | 194,300   | 61.78      |  |
| 2020   | Basic    | 604,685    | 30.33      |  | 1,389,090 | 69.67      |  |
|        | TOTAL    | 2,888,636  | 52.26      |  | 2,638,656 | 47.74      |  |
|        |          |            |            |  |           |            |  |
|        | Enhanced | 2,596,859  | 67.93      |  | 1,226,179 | 32.07      |  |
| 2021   | Standard | 160,680    | 41.71      |  | 224,568   | 58.29      |  |
|        | Basic    | 882,253    | 33.35      |  | 1,762,901 | 66.65      |  |
|        | TOTAL    | 3,639,792  | 53.11      |  | 3,213,648 | 46.89      |  |
|        |          |            |            |  |           |            |  |
|        | Enhanced | 2,956,824  | 66.50      |  | 1,489,812 | 33.50      |  |
| 2022   | Standard | 175,257    | 45.14      |  | 212,987   | 54.86      |  |
| 2022   | Basic    | 923,378    | 35.21      |  | 1,699,159 | 64.79      |  |
|        | TOTAL    | 4,055,459  | 54.38      |  | 3,401,958 | 45.62      |  |
|        |          |            |            |  |           |            |  |
|        | Enhanced | 7,717,408  | 67.17      |  | 3,771,257 | 32.83      |  |
| Whole  | Standard | 456,163    | 41.93      |  | 631,855   | 58.07      |  |
| Period | Basic    | 2,410,316  | 33.19      |  | 4,851,150 | 66.81      |  |
|        | TOTAL    | 10,583,887 | 53.35      |  | 9,254,262 | 46.65      |  |

Women are around twice as likely to be subject to Enhanced checks as men are, with that balance remaining broadly stable across the period. However, whilst male Standard and Basic checks are more common, this gap is narrowing over time, though in Basic checks it remains the case that nearly twice as many checks are conducted on male applicants as female.

## Age

The following shows the overall total number of checks in the period concerned (2020-22) carried out by age categories, 'working age' highlighted in red. The percentages refer to the percentages of that check type conducted that were done so on the age in question (e.g. 1.30% of all Enhanced checks were conducted on those aged 16 and under).

|            | Enhanced   |       | Standard  |       | Basic     |       | TOTAL      |       |  |
|------------|------------|-------|-----------|-------|-----------|-------|------------|-------|--|
|            | Number     | %     | Number    | %     | Number    | %     | Number     | %     |  |
| 16 & under | 149,604    | 1.30  | 4,312     | 0.40  | 18,083    | 0.25  | 171,999    | 0.87  |  |
| 17-24      | 2,195,940  | 19.11 | 174,080   | 16.00 | 1,611,756 | 22.20 | 3,981,776  | 20.07 |  |
| 25-65      | 8,702,523  | 75.75 | 881,202   | 80.99 | 5,547,611 | 76.40 | 15,131,336 | 76.27 |  |
| 18-65      | 10,733,291 | 93.43 | 1,048,072 | 96.33 | 7,129,775 | 98.19 | 18,911,138 | 95.33 |  |
| 66+        | 440,598    | 3.84  | 28,424    | 2.61  | 84,016    | 1.16  | 553,038    | 2.79  |  |

The higher the level of check, the more likely it is to have been conducted on those outside of typical working age, though in both cases these numbers are low. In all cases the majority of checks are being done on the (larger) cohort of those 25 and over. Of particular interest is the number of Enhanced checks being done on children, the overwhelming majority of which are conducted on 16-year-olds; across the period, there were 149,604 such checks conducted on those aged 16 and under.

#### Potential Impact of Changes to Filtering Rules

The percentage of checks that disclosed something has fallen across this period. The following table shows, for each year, the number of checks where information was disclosed along with the percentage of checks where there was information disclosed:

|          | 2020    |      | 2021    |      | 2022    | 2022 |  |  |
|----------|---------|------|---------|------|---------|------|--|--|
|          | Number  | %    | Number  | %    | Number  | %    |  |  |
| Enhanced | 176,491 | 5.48 | 113,401 | 2.97 | 125,662 | 2.83 |  |  |
| Standard | 31,016  | 9.86 | 21,620  | 5.61 | 20,586  | 5.30 |  |  |
| Basic    | 32,796  | 1.64 | 44,206  | 1.67 | 40,453  | 1.54 |  |  |
|          |         |      |         |      |         |      |  |  |
| TOTAL    | 240,303 | 4.35 | 179,227 | 2.62 | 186,701 | 2.50 |  |  |

The drop overall (from 4.35% to 2.5%) is driven mainly by a drop in the proportion of Standard or Enhanced checks that disclose something, whereas the figures for Basic checks have remained stable. In 2021 and 2022 there is a noticeably lower level of disclosure on Standard and Enhanced checks, likely a sign of the impact of the changes to filtering rules taking effect and some convictions being removed from checks they might previously have appeared on<sup>1</sup>. This assumption is underlined by the lack of significant change on levels of disclosure on Basic checks, where filtering would not have an impact. It is also worth noting that the fall in the percentage of checks where something is disclosed at both Enhanced and Standard levels is tempered somewhat by the overall increase (see above) in checks being conducted.

The following tables look at the percentage of checks at each level that disclose something by both age and gender across the period. First, the percentage of checks that disclosed something by gender and year is as follows:

|          | FEMALE |      |      | MALE  |      |      |
|----------|--------|------|------|-------|------|------|
|          | 2020   | 2021 | 2022 | 2020  | 2021 | 2022 |
| Enhanced | 3.40   | 1.93 | 1.77 | 9.75  | 5.17 | 4.93 |
| Standard | 3.71   | 2.22 | 2.30 | 13.67 | 8.04 | 7.78 |
| Basic    | 0.42   | 0.44 | 0.40 | 2.18  | 2.29 | 2.16 |
|          |        |      |      |       |      |      |
| TOTAL    | 2.79   | 1.58 | 1.48 | 6.05  | 3.79 | 3.73 |

Besides the percentages of disclosure being higher for male vs female checks, the trend of a fall in levels of information being disclosed by the checks impacted by the changes to filtering rules is similar for both, with declines of around a half.

<sup>&</sup>lt;sup>1</sup> Further information on filtering can be found on our website <u>here</u>.

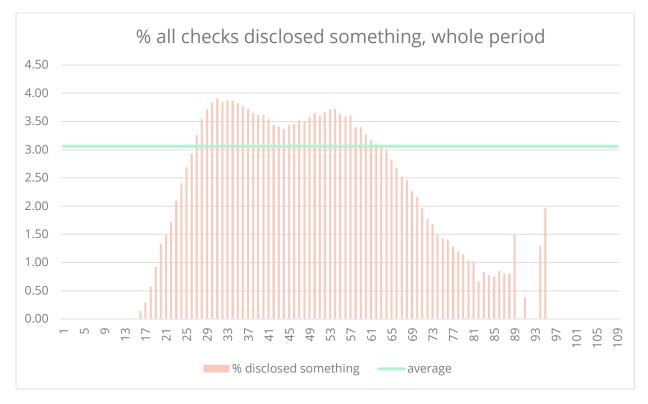

|              | Enhanced |      |      | Standard |      |      | Basic |      |      | All  |      |      |
|--------------|----------|------|------|----------|------|------|-------|------|------|------|------|------|
|              | 2020     | 2021 | 2022 | 2020     | 2021 | 2022 | 2020  | 2021 | 2022 | 2020 | 2021 | 2022 |
| 16 and under | 0.34     | 0.08 | 0.10 | 0.11     | 0.00 | 0.16 | 0.06  | 0.24 | 0.09 | 0.30 | 0.09 | 0.10 |
| 17-25        | 2.12     | 1.38 | 1.26 | 4.51     | 3.00 | 2.62 | 1.62  | 1.69 | 1.48 | 2.02 | 1.59 | 1.41 |
| 26-35        | 6.27     | 3.96 | 3.54 | 10.62    | 7.43 | 6.70 | 2.25  | 2.21 | 2.05 | 4.79 | 3.35 | 3.08 |
| 36-45        | 6.70     | 3.61 | 3.43 | 11.21    | 6.57 | 6.54 | 1.58  | 1.65 | 1.61 | 5.08 | 3.02 | 2.96 |
| 46-55        | 7.18     | 3.38 | 3.32 | 11.66    | 5.58 | 5.49 | 1.09  | 1.12 | 1.07 | 5.59 | 2.78 | 2.76 |
| 56-65        | 6.36     | 3.02 | 3.07 | 10.81    | 5.19 | 5.28 | 0.80  | 0.73 | 0.74 | 5.23 | 2.54 | 2.60 |
| 66+          | 3.63     | 1.72 | 1.65 | 6.94     | 3.75 | 3.04 | 0.52  | 0.47 | 0.38 | 3.38 | 1.63 | 1.52 |

The following table shows the percentage of checks that disclosed something by age groups for each year, whilst the graphs show trends over time for each type of check.

This trend is particularly notable in the 46-55 age group, where the biggest fall is seen on both enhanced (7.18% to 3.32%) and standard (11.66% to 5.49%), and in general it is the older age groups where this trend is most significant.

The following graph shows the percentage of all checks, for each age, across the whole period (2020-2022) that disclosed something, with the overall figure (3.06%) marked with a line for reference.

## Conclusion

These data headlines highlight a number of key points that are worthy of further investigation and consideration.

- 1. It is disappointing that DBS do not hold similar data broken down by ethnicity. The ability to interrogate the data by age and gender has given a picture of areas where DBS checks may be having a disproportionate impact. The inability to do the same with data concerning ethnicity is frustrating.
- 2. The data has highlighted a number of inferences that can be made with regards to the impact of DBS checks on women. Using this data as a starting point, we have a produced a briefing on these issues in more depth, highlighting disproportionalities to which women in the criminal justice system are vulnerable. This can be read in full on our website <u>here</u>.
- 3. There are some patterns in the data relating to age that require further consideration. Specifically, some of the patterns that show a significant number of Enhanced checks being conducted on those aged 16 and under is worthy of further consideration, and we will be looking into this in due course.
- 4. There has clearly been a positive impact of the changes to the filtering rules with a smaller proportion of Standard and Enhanced checks disclosing information, thus allowing a greater proportion of people to seek opportunities without fear of how a past conviction might hold them back. However, the overall rise in the number of checks being conducted dampens this impact noticeably, meaning a significant number of people still feel the harmful impacts of stigma and discrimination as a result of their criminal record.

The criminal record system entrenches other forms of unfairness in the criminal justice system. This data highlights some patterns within this. For people with a criminal record, stigma and discrimination are very real fears. This often manifests itself in the Chilling Effect, whereby fear of being judged negatively discourages people from seeking out opportunities that they otherwise might. This data highlights the numbers of people where this process may engender such fear, as well as highlighting certain demographic trends and discrepancies.
